Dear Sir

**RE: PORTABLE EMERGENCY OXYGEN SYSTEM MODEL 615**

It is with great pleasure and with certainty that we can confirm the necessity for a life-saving device such as the above on our premises.

A church organization based in Cape Town South Africa; we experience beautiful Mediterranean weather, however being below sea-level the air has a higher moisture content than South Africa's above sea-level cities. As a result asthma is a common illness amongst our people. The church building seats more than 500 people on a Sunday from kindergarten to the aged. This and a variety of other social and community activities during the week is the order of the day. As a consequence should any eventuality occur during any such activity we would be ill-equipped without the OxySure Model 615 portable emergency oxygen device.

We have installed our OxySure Model 615 within our premises for visibility and easy access. We therefore highly recommend this product for any Public building and or church buildings due to its accessibility; its light-weighted-ness, user-friendliness, portability, and for the provision of medically pure oxygen without the danger of having compressed air in a tank on the premises.

**Yours Faithfully**

**Director/Pastor N. E. Coetzee**
